

Instruction for ordering articles via Elsevier-ScienceDirect

(Date: 19.03.2012)

Advantage of ScienceDirect-orders over Subito-orders:

- instantaneous access
- real pdf (better quality, color-prints)
- no DRM (full unrestricted persistent access (opening, printing))

Disadvantages of ScienceDirect-orders over Subito-orders:

- high costs of (22 USD per article + 19 % VAT =) 20,23 EUR
- personal registration at Elsevier required

How to order an article via ScienceDirect:

- 1) You have found the article of interest in ScienceDirect. If you haven't registered before, you must fill out the personal registration form in order to log in to Elsevier (with this registration you also gain access to numerous other personalized services from Elsevier such as an alerting service). Please be advised to access the articles on Elsevier via the university campus or via the VPN-client in order to be in the right IP-range. If not, you will only see a "purchase" button which cannot be used for acquiring an article via the university library.

The screenshot displays the ScienceDirect website interface. At the top, there are navigation links: Home, Browse, Search, My settings, and My alerts. A search bar is located on the right. The main content area shows the article title 'Propagation and stability characteristics of laminar lifted diffusion flame base' from the journal 'Combustion and Flame', Volume 159, Issue 5, May 2012, Pages 1821–1831. The authors listed are Ruey-Hung Chen, Zhiliang Li, and Tran X. Phuoc. The article is available for full text viewing. On the right side, there is a 'Related articles' section with several links to other papers. At the bottom right, there is a 'Table Download' section with a 'Find Tables' button. The top right corner features a red circle around the 'Register' and 'Login' links.

2) You will then receive the full-text document via the **PDF-Button**:

3) If the university library does not have a license to the corresponding journal, you will see the following **Message**:

Full Text Access

You have requested access to the following article:

Propagation and stability characteristics of laminar lifted diffusion flame base Original Research Article

Combustion and Flame, Volume 159, Issue 5, May 2012, Pages 1821-1831
Ruey-Hung Chen, Zhiliang Li, Tran X. Phuoc

This article is not included in your organization's subscription. However, you may be able to access this article under your organization's agreement with Elsevier. Click the **Continue** button below to proceed.

Continue | Cancel

Do not click the Continue button more than once. Please be patient while your request is being processed.

Please Note: University Library of Bayreuth will be charged for this transactional access to this non-subscribed article.

4) Via **Continue** you will then receive the full-text document which can be downloaded and printed. Please be advised that **by clicking on the “Continue”-button the university library will be billed from Elsevier with 20,23 Euro per article.**
